1

What is Hour Rich?

The simple explanation

Hour Rich is a set of ready-made instructions for the AI called Claude that turns it from "just a chatbot" into your **full-time personal assistant**.

Imagine you hired someone who every morning:

- ✓ Checks your email and drafts replies in your voice
- ✓ Prepares a content report — what's working, what flopped
- ✓ Monitors your ads — flags overspend and winners
- ✓ Plans your meals for the week and makes a grocery list
- ✓ Gives you a personalized journaling prompt
- ✓ Sorts files in your Downloads folder
- ✓ Checks in on your clients

And all of this **without you doing anything**. You wake up — the report is ready. You open your laptop — files are already sorted. You check email — replies are already written. You just hit "send".

Here's all you do: Download a folder, open it in Claude Code, answer 20 questions — and AI starts working for you automatically. Forever.

2

Who Is This For?

Check if this fits you

Hour Rich is for you if you are:

- ✓ A solopreneur (coaching, courses, services, content)
- ✓ Tired of doing everything yourself — email, content, clients, admin
- ✓ Already tried AI but it produces "AI slop" that doesn't sound like you
- ✓ Wanting to close your laptop at 2pm with zero guilt
- ✓ Have clients/students and want to serve them better
- ✓ Don't want to hire a VA at \$500-2,000/month

Hour Rich is NOT for you if:

- ✗ You're looking for a "magic button" — this needs 15 minutes of setup
- ✗ You're not ready to pay for Claude (\$20-100/month)
- ✗ You don't have a business or personal brand

3

The 3 Layers

How Hour Rich covers your entire world

Layer 1 — Your Life

Everything that makes your day easier before you even sit down to work.

- ✓ Daily reflection/journaling prompts
- ✓ Weekly meal plan + grocery list
- ✓ Personal admin: schedule, reminders, daily priorities
- ✓ Morning routine: everything in one brief

Layer 2 — Your Business

This is where 5+ hours come back every week. Everything that eats your workday.

- ✓ Email: inbox scanning + draft replies in your voice
- ✓ Content: analytics — what's working, what flopped
- ✓ Ads: monitoring — where budget is wasted, what's winning
- ✓ Google Analytics: traffic, top pages, recommendations
- ✓ Files: auto-sort your Downloads folder
- ✓ Copywriting: edit any text in your voice
- ✓ Weekly report: full business performance digest

Layer 3 — Your Clients

The layer nobody teaches. Your clients get a better experience AND you get your time back.

- ✓ Onboarding: automated flows for new clients
- ✓ Feedback: collect and analyze client responses
- ✓ Communication: message templates in your voice
- ✓ Delivery: resources, FAQs, guides for clients

You don't have to enable all 3 layers. No clients? Just skip Layer 3. The system adapts to you.

4

What You Need

Before you begin

Required:

WHAT	WHY	COST
Claude Code	The app that runs the entire system	Free (included in subscription)
Claude Pro plan	Minimum for manual usage	\$20/month
Claude Max plan	For automated cron tasks (recommended)	\$100/month
Computer	Windows or Mac	—

Optional (but recommended):

MCP CONNECTOR	WHAT IT UNLOCKS	WITHOUT IT
Gmail MCP	Email scanning, auto-drafted replies in your voice	Skip email module

MCP CONNECTOR	WHAT IT UNLOCKS	WITHOUT IT
Google Calendar MCP	Daily schedule, reminders, appointment prep	Manual schedule input
Google Analytics MCP	Website traffic reports, top pages, recommendations	Skip GA module
Meta Ads MCP	Ad spend monitoring, CPA alerts, winner/loser flags	Skip ads module
Notion MCP	Deliver briefs to Notion, create pages, search workspace	Reports saved to files instead

What are MCP connectors?

MCP stands for **Model Context Protocol**. Think of it like a bridge between Claude and your other apps.

Right now, Claude lives in its own world — it can't see your Gmail, your calendar, or your ad account. MCP connectors are what give Claude **permission and access** to talk to those apps.

An analogy: Imagine Claude is a personal assistant sitting at a desk. MCP connectors are like handing them the keys to your email, your calendar, and your ad dashboard. Without the keys, they can't open those doors. With the keys, they can check your email, read your schedule, and pull your ad data — all automatically.

Are they safe? Yes. MCP connectors use official APIs from Google, Meta, and Notion. You authorize access through the same sign-in screens you already trust (like "Sign in with Google"). Claude only gets the permissions you approve — and you can revoke access anytime from your Google/Meta/Notion account settings.

Do they cost anything? No. All the MCP connectors included in Hour Rich are free. You're connecting to services you already use — there's no extra subscription

or fee involved.

Don't worry: MCP connectors are optional. Each one you add unlocks more automation, but the system works fine without them — you just get fewer automated features. Start with zero and add them one by one as you're ready.

How to Install MCP Connectors (included in your folder)

All MCP connector files are **already in your Hour Rich folder**. You don't need to find or download anything. Here's how to install each one:

1

Gmail MCP — gmail-mcp.zip

What it unlocks: Email scanning, auto-drafted replies in your voice

1. Find `gmail-mcp.zip` in your Hour Rich folder
2. Unzip it (right-click → Extract All)
3. Open Claude Code in the Hour Rich folder
4. Type: "Help me set up the Gmail MCP from the `gmail-mcp` folder"
5. Claude will walk you through connecting your Gmail account
6. You'll need to authorize Claude to access your Gmail (a Google sign-in popup will appear)

If authorization fails: Make sure you're logged into the correct Google account in your browser. Try using an incognito window if you have multiple accounts.

2

Google Calendar MCP — google-calendar-mcp.zip

What it unlocks: Daily schedule, appointment reminders, time blocking

1. Find google-calendar-mcp.zip in your Hour Rich folder
2. Unzip it
3. In Claude Code, type: "Help me set up the Google Calendar MCP from the google-calendar-mcp folder"
4. Authorize Claude to access your Google Calendar

3 Google Drive MCP — google-drive-mcp.zip

What it unlocks: Reading files from Drive, client feedback forms, shared documents

1. Find google-drive-mcp.zip in your Hour Rich folder
2. Unzip it
3. In Claude Code, type: "Help me set up the Google Drive MCP from the google-drive-mcp folder"
4. Authorize Claude to access your Google Drive

4 Google Analytics MCP — google-analytics-mcp.zip

What it unlocks: Website traffic reports, top pages, referral sources, weekly trends

1. Find google-analytics-mcp.zip in your Hour Rich folder
2. Unzip it
3. In Claude Code, type: "Help me set up the Google Analytics MCP from the google-analytics-mcp folder"

4. You'll need your GA4 property ID (Claude will help you find it)

5

Meta Ads MCP — meta-ads-mcp.zip

What it unlocks: Ad spend monitoring, CPA alerts, campaign performance reports

1. Find meta-ads-mcp.zip in your Hour Rich folder
2. Unzip it
3. In Claude Code, type: "Help me set up the Meta Ads MCP from the meta-ads-mcp folder"
4. You'll need your Meta Business account access (Claude will guide you)

6

Notion MCP — notion-mcp.zip

What it unlocks: Deliver briefs and reports straight to Notion, create pages, search your workspace

1. Find notion-mcp.zip in your Hour Rich folder
2. Unzip it
3. In Claude Code, type: "Help me set up the Notion MCP from the notion-mcp folder"
4. You'll need to create a Notion integration and share your workspace with it (Claude will walk you through it)

If Notion connection fails: Make sure you've shared the correct Notion pages/databases with your integration. Go to

the page in Notion → click "..." menu → "Connections" → add your integration.

Pro tip: You don't need to install all connectors at once. Start with **Gmail** (the most impactful one), use Hour Rich for a week, then add more connectors when you're ready. The setup pattern is always the same: unzip → ask Claude to set it up → authorize → done.

The key principle: The system works with whatever you have connected. Don't have Google Analytics? That module simply doesn't activate. No clients? Layer 3 gets skipped. Nothing breaks.

5

Installation

Step by step — simple and easy

1

Install Claude Code

Claude Code is an app by Anthropic that lets AI work with files on your computer.

On Windows:

1. Open claude.ai/code in your browser
2. Click "Download for Windows"
3. Run the downloaded file and follow the prompts

4. Once installed, log in with your Claude account

On Mac:

1. Open **claude.ai/code**
2. Click "Download for Mac"
3. Drag to Applications folder
4. Open and log in

If installation fails:

- Make sure you have Windows 10+ or macOS 12+
- Try running as Administrator (right-click → "Run as administrator")
- Temporarily disable antivirus during installation
- Restart your computer and try again

2

Get a Claude Subscription

Claude Code requires a paid subscription:

PLAN	WHAT YOU GET	RECOMMENDATION
Pro (\$20/mo)	Everything works, but only when you manually run commands	To get started
Max (\$100/mo)	Everything works + automated cron tasks (morning brief arrives by itself)	Recommended

Subscribe at: claude.ai → Settings → Subscription

3

Unzip Hour Rich

You received a file called **hour-rich.zip**. Now:

1. Find the file **hour-rich.zip** (probably in Downloads)
2. **Windows:** Right-click → "Extract All..." → Choose "Desktop" → "Extract"
3. **Mac:** Double-click the .zip — it extracts automatically
4. A folder called **hour-rich** will appear on your Desktop

Important: Don't rename the folder and don't move files around inside it. Everything should stay exactly as it is.

**If the .zip won't extract:**

- Install the free program 7-Zip (7-zip.org) → right-click → 7-Zip → Extract here
- Or use WinRAR

4

Open the Hour Rich Folder in Claude Code

Now you need to tell Claude Code to work with your Hour Rich folder. Two ways:

Method A: Through Claude Code (easier)

1. Open Claude Code
2. Click "Open Folder" or "File → Open Folder"
3. Find the **hour-rich** folder on your Desktop
4. Click "Select Folder"

Method B: Through the Terminal

```
# Windows
cd Desktop/hour-rich
claude

# Mac
cd ~/Desktop/hour-rich
claude
```

**If "claude" command is not found:**

- Close and reopen your terminal
- Try the full path: C:\Users\

```
[YourName]\AppData\Local\Programs\claude\claude.exe
```

- Or just open Claude Code via the desktop shortcut and use "Open Folder"

5 Verify Everything Works

When Claude Code opens in the hour-rich folder, you'll see an input field.

Type:

```
Hi! What files do you see in this folder?
```

Claude should respond with something like: *"I see the Hour Rich project with CLAUDE.md, a skills folder, commands..."*

If it sees the files — **you're ready for setup!**

If Claude doesn't see any files:

- You opened Claude Code in the wrong folder. Close it and reopen in **hour-rich**
- Make sure the `.claude` folder isn't empty (it might be hidden — enable "Show hidden files" in your file explorer settings)

6

Setup Wizard (/hour-rich)

15 minutes — and the system works forever

With Claude Code open in the hour-rich folder, simply type:

```
/hour-rich
```

Claude will launch the setup wizard. It asks you one question at a time. Here's what to expect:

Part 1: Your Life (Layer 1)

Claude will ask:

- ✓ "What does your ideal morning look like?"
- ✓ "Do you want daily journal prompts? What themes matter to you?"
- ✓ "Do you meal plan? Dietary restrictions? How many people?"
- ✓ "What personal admin eats your time?"

Part 2: Your Business (Layer 2)

- ✓ "What's your business? What do you sell?"
- ✓ "What platforms do you post content on?"
- ✓ "Do you run ads?"
- ✓ "What email do you use?"
- ✓ "What takes the most time every week?"
- ✓ **"Paste 3-5 examples of how YOU write"** (captions, emails, DMs — so AI learns your voice)

Part 3: Your Clients (Layer 3)

- ✓ "Do you have clients or students?"
- ✓ "What do you offer them?"
- ✓ "How do you onboard new clients?"

- ✓ "What messages do you send over and over?"

Part 4: Schedule

- ✓ "What time do you want your morning brief?" (default: 7:00 AM)
- ✓ "What day for the weekly report?" (default: Sunday)
- ✓ "What day for meal planning?" (default: Monday)

Tip: If you don't know what to answer, just say "skip" or "not sure, skip this." Claude will simply disable that module. You can always come back and enable it later.

What Happens After

Claude automatically:

1. Creates **config/my-profile.md** — your full profile
2. Saves **templates/email-voice.md** — your writing style samples
3. Generates **CLAUDE.md** — the brain file, customized to you
4. Creates **automated cron schedules** — morning brief, weekly report, meal plan
5. Shows you a full activation report: what's on, what's off, what commands are available

Done! Tomorrow morning at your chosen time, your first morning brief will be waiting. You don't press anything — it just appears.

7

Your Daily Routine With Hour Rich

A typical day from morning to close

7:00 AM**Morning brief arrives automatically**

Email drafts, content stats, ad alerts, journal prompt, daily schedule

**8:00 AM****You review the brief over coffee**

Hit "send" on email drafts. Read your journal prompt. Check the schedule.

**8:30 AM****Open your laptop**

File Organizer auto-sorts Downloads. You work — create content, serve clients, build offers.

**10:00 AM****Need a video script?**

Type `/content-scripter` — script ready in 30 seconds, in your voice.

**11:00 AM****Need to message a client?**

Type `/client-comms` — personalized draft ready. In your style.

**2:00 PM****Close your laptop**

Everything is done. Content written. Clients served. Email handled. Files sorted.

**SUNDAY****Weekly report arrives automatically**

Hours saved, what worked, what didn't, recommendations for next week.

8 All Commands

Complete reference — what to type and what you get

Automated (run by themselves after setup)

COMMAND	WHAT IT DOES	WHEN
/morning	Full morning brief across all 3 layers	Daily at your time
/weekly-report	Weekly performance digest + hours saved	Every Sunday
/meal-planner	Meal plan + grocery list	Every Monday

On-Demand: Layer 1 — Life

COMMAND	WHAT IT DOES	WHEN TO USE
/journal	Personalized reflection prompt	When you want to think or reflect
/personal-admin	Schedule, reminders, priorities	When you want to check what's on today
/meal-planner	Generate a new meal plan	When you need a fresh plan

On-Demand: Layer 2 — Business

COMMAND	WHAT IT DOES	WHEN TO USE
/manage-email	Scan inbox, draft replies	Mid-day inbox refresh

COMMAND	WHAT IT DOES	WHEN TO USE
/copy-editor	Edit any text in your voice	Captions, emails, scripts — anything
/file-organizer	Sort files into folders	When Downloads is a mess
/ga-report	Google Analytics report	When you want website insights

On-Demand: Layer 3 — Clients

COMMAND	WHAT IT DOES	WHEN TO USE
/client-comms	Draft client messages in your voice	Check-ins, welcomes, follow-ups
/client-feedback	Analyze client feedback patterns	When you want to know what clients think
/client-delivery	Create resources for clients	FAQs, guides, checklists, templates

Setup

COMMAND	WHAT IT DOES
/hour-rich	Master setup wizard (run once)
/my-business	Update your profile and business config

9

If Something Doesn't Work

A fix for every problem

Claude doesn't see any files / doesn't know what Hour Rich is

You opened Claude Code in the wrong folder. **Fix:** Close Claude Code, reopen it and select the `hour-rich` folder specifically (File → Open Folder → `hour-rich`).

`/hour-rich` doesn't work / "command not found"

Fix 1: Make sure you type it with the forward slash: `/hour-rich` (not just "hour-rich")

Fix 2: Check that `.claude/skills/hour-rich/SKILL.md` exists in your folder

Fix 3: Ask Claude: "Show me what skills you can see" — it'll list them

Morning brief doesn't arrive automatically

Reason 1: You're on the Pro plan (\$20) — automated crons require Max (\$100)

Reason 2: The cron didn't get created during setup. Run `/hour-rich` again and go through the Schedule section

Workaround: Just type `/morning` manually each morning

Email module doesn't work

Gmail needs to be connected via MCP (Model Context Protocol). **Fix:** Ask Claude: "Help me connect Gmail MCP" — it'll walk you through the process step by step.

Claude doesn't write in my voice / sounds robotic

AI hasn't learned your style yet. **Fix:** Open `templates/email-voice.md` and add more examples of how you write (5-10 real captions, emails, DMs). The more examples, the more accurate the voice.

I want to disable a module

Just tell Claude: "Disable the [module name]" or "I don't want journal prompts in my morning brief." It'll adjust the settings.

I want to change the morning brief time

Tell Claude: "Change my morning brief time to 8:00 AM" — it'll update the cron.

Something is completely broken and I don't know what to do

Type in Claude Code: "Something isn't working with [describe the problem]. Help me fix it." — Claude can read its own files and diagnose the issue. It can literally fix itself.

10 Lifehacks

Pro tips to get even more out of Hour Rich

Lifehack #1: Voice Samples Are Everything

The more writing examples you give, the less editing you'll need. 3 examples = okay. 10 examples = AI writes like you. 20 examples = you can't tell who wrote it.

Lifehack #2: Keep Claude Code Open

While Claude Code is open, files get auto-sorted every 30 minutes. Just keep it running in the background while you work.

Lifehack #3: Check Your Weekly Reports

Every Sunday, open `reports/weekly-report-[date].md`. It shows how many hours you saved. This is incredibly motivating.

Lifehack #4: Talk to Claude Like a Human

No need for formal prompts. Just type like you'd text a friend: "check my email," "write a check-in for Anna," "what do I have today?"

Lifehack #5: Combine Commands

You can ask for multiple things at once: "Check my email and give me a journal prompt for today." Claude handles both.

Lifehack #6: Customize the Skills

All skills are simple text files (.md). Open any one in `.claude/skills/[name]/SKILL.md` and tweak it. For example, add new file categories for the organizer.

Lifehack #7: Monday = Planning Power Day

On Monday morning you get: morning brief + meal plan + grocery list. It's the most powerful day in the system. Don't skip it.

11

FAQ

Answers to every question

Do I need to know how to code?

No. You answer questions and type commands like `/morning`. Zero coding required.

Does this work on Windows and Mac?

Yes. Claude Code runs on both platforms.

What if I don't have clients?

Skip Layer 3 during setup. The system works great with just Layer 1 (Life) and Layer 2 (Business). When clients come along, just run `/hour-rich` again.

How much does it cost to run monthly?

Only the Claude subscription: \$20/month (Pro) or \$100/month (Max for automation). Nothing else. Hour Rich is a one-time purchase.

Is my data safe?

Everything runs through the official Claude by Anthropic. Your data is processed according to their privacy policy. No data is sent to third parties.

Can I cancel my Claude subscription and come back later?

Yes. Your Hour Rich settings are saved in the folder on your computer. When you resubscribe, everything will be right where you left it.

Can I use ChatGPT instead of Claude?

No. Hour Rich is built on Claude Code — a specific technology by Anthropic. ChatGPT doesn't support skills, commands, and crons in this way.

Can AI accidentally delete my files?

The File Organizer MOVES files, never deletes them. And it always shows you a plan before moving anything — you confirm every action. In auto-mode, it only moves obvious files (screenshots, PDFs) and logs every action.

How do I update Hour Rich if a new version comes out?

Download the new version, unzip it next to the old one. Copy your `config/my-profile.md` and `templates/email-voice.md` into the new folder. Your settings carry over.

Do I need internet?

Yes. Claude runs through Anthropic's cloud. No internet = nothing works.

12 Glossary

Every "techy" word explained in plain English

TERM	WHAT IT MEANS
Claude Code	An app by Anthropic where AI can work with files on your computer
Skill	A set of instructions that tells Claude HOW to do a specific task. Like a recipe for a chef.
Command	What you type to run a skill. Starts with / — for example, /morning
Cron	An alarm clock for AI. Tells it "at 7 AM, do [task]." Runs automatically.

TERM	WHAT IT MEANS
Remote Trigger	A cron that runs on Anthropic's server (even when your computer is off)
Session Cron	A cron that only works while Claude Code is open on your computer
MCP	Model Context Protocol — a way to connect Claude to other services (Gmail, Calendar, etc.)
CLAUDE.md	The brain file. Claude reads it first to learn who you are, what you do, and how to work with you.
Config	A file with your settings — profile, voice, preferences
Reports	The folder where all generated reports land (morning, weekly, meal plans)
Voice Samples	Examples of how YOU write. AI studies them to match your exact style.
Layer	An area of automation. Layer 1 = life, Layer 2 = business, Layer 3 = clients
Token	"Fuel" for AI. Every request uses tokens. Included in your Claude subscription.
On-demand	Only works when you manually type the command

Hour Rich

Close your laptop at 2pm. Zero guilt.

Built with Claude Code
